Know your Optical Smoke Alarm

1

Test/Reset Button

Used to test the function and reset the alarm.

2

Red and green LED

Indicates operation, test, and alarm memory

3

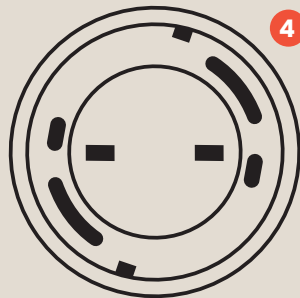

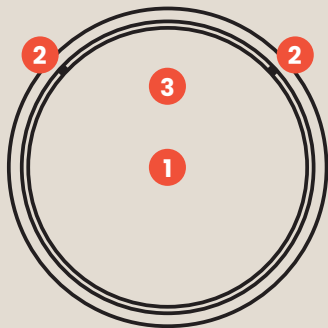

Siren

Emits a minimum of 85 dB when the alarm is triggered.

4

Mounting Plate

For attachment to the ceiling.

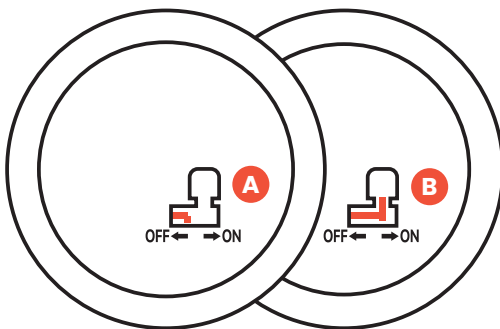

Using your Optical Smoke Alarm

How to activate your Optical Smoke Alarm

Before first use, move the red activation pin from the **OFF (1)** position to the **ON (2)** position.

Tilt the pin down so that it is securely locked in the notch on the back of the smoke alarm. The pin can be used again if the alarm needs to be deactivated, e.g. when moving house.

Testing the smoke alarm

- Always test the smoke alarm once a year and after you have been away.
- Hold down the test button until the alarm starts. When the button is released, the alarm may continue for up to 10 seconds.
- Check that the red LED flashes approximately every 5 minutes.

Resetting the alarm

- If the alarm is triggered by, for example, steam or smoke from cooking, you can turn it off by pressing the test button.

Maintenance

Clean the smoke alarm once a month.

- Use a vacuum cleaner on a low setting across the front and along the edges.
- A soft brush attachment on the vacuum cleaner is recommended.
- Alternatively, the unit can be wiped with a slightly damp cloth.
- Be careful not to scratch the surface

Battery Life

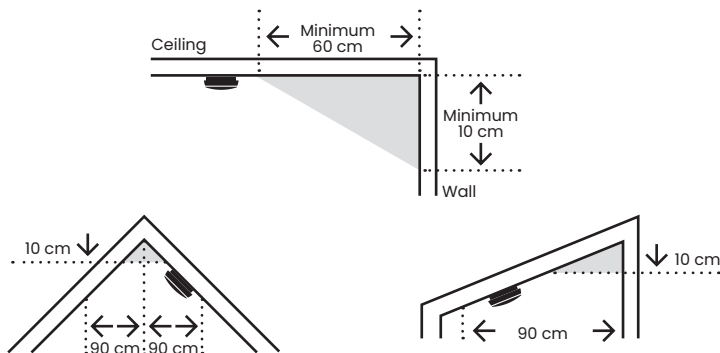

- The smoke alarm has a built-in 3V battery with a lifespan of up to **10 years** under normal use.
- When the battery is nearing the end of its life, the alarm will emit **3 beeps every 43 seconds** for approximately 30 days.
- The battery cannot and must not be replaced. The entire smoke alarm must be replaced.

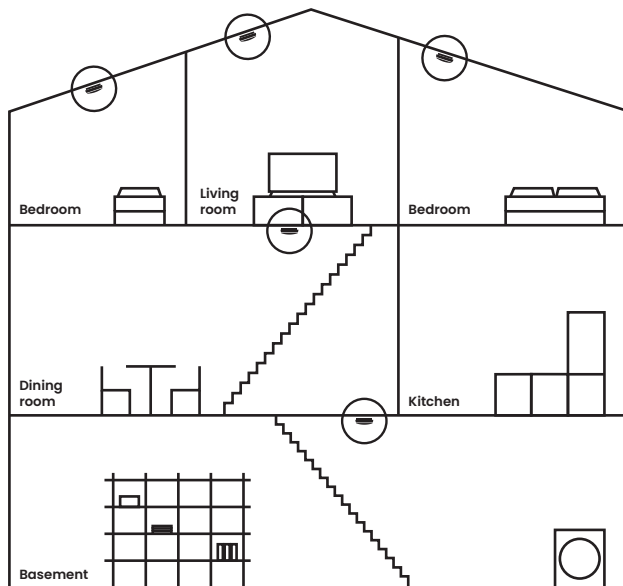

Disposal

- When the battery is depleted (after approx. 10 years), the smoke alarm must be disposed of as **electronic waste (WEEE)**.
- Proper disposal helps preserve resources and prevents health and environmental hazards caused by hazardous materials. It must not be disposed of with household waste.
- Return the product to your local recycling center.

Mounting your Optical Smoke Alarm

- Always install on the ceiling, at least **60 cm** from walls and corners.
- At minimum, one smoke alarm should be placed between the bedrooms and potential fire sources (kitchen, utility room, living room, garage, etc.).
- There should be no more than **10 meters** between each smoke alarm.
- Additional safety is achieved by installing alarms in all living areas.
- It is not recommended to install the smoke alarm at the peak of a pitched ceiling or in a dead angle where smoke will not accumulate. These areas are indicated in grey in the illustration.
